

Table 1: Effects of Ownership Change: Chain vs. Non-chain Facilities

Outcome	No controls	Controls	Observations
Panel A: Chain, N = 4304 facilities			
Occupancy rate	1.962*** (0.402)	1.783*** (0.403)	355,270
Spare capacity	-0.019*** (0.004)	-0.017*** (0.004)	355,270
Medicare share	1.613*** (0.214)	1.579*** (0.211)	355,270
Medicaid share	0.591 (0.694)	0.556 (0.708)	355,270
Average length of stay	-5.362 (4.914)	-2.745 (5.109)	352,601
Panel B: Non-chain, N = 3337 facilities			
Occupancy rate	3.879*** (0.600)	3.978*** (0.592)	260,413
Spare capacity	-0.039*** (0.006)	-0.040*** (0.006)	260,413
Medicare share	1.153*** (0.417)	1.099*** (0.408)	260,413
Medicaid share	-3.530*** (0.894)	-3.594*** (0.905)	260,413
Average length of stay	-21.410*** (8.055)	-22.560*** (8.236)	251,324

Notes: Each cell reports the coefficient on *post*, with standard errors in parentheses. All models include facility and calendar-month fixed effects. The controls column adds beds, government ownership, and non-profit ownership.

Standard errors are clustered two ways by facility and calendar month. Statistical significance: *** $p < 0.01$, ** $p < 0.05$, * $p < 0.10$.
