

Table 1: Effects of Ownership Change: Chain vs. Non-chain Facilities

Outcome	No controls	Controls	Observations
Panel A: Chain, N = 3792 facilities			
Occupancy rate	1.936*** (0.413)	1.748*** (0.408)	318,461
Medicare share	1.568*** (0.220)	1.560*** (0.211)	318,461
Medicaid share	0.658 (0.692)	0.635 (0.704)	318,461
Average length of stay	-6.702 (5.067)	-3.657 (5.241)	316,191
Panel B: Non-chain, N = 2933 facilities			
Occupancy rate	3.502*** (0.629)	3.577*** (0.619)	239,779
Medicare share	1.223*** (0.450)	1.097** (0.447)	239,779
Medicaid share	-3.552*** (1.039)	-3.504*** (1.046)	239,779
Average length of stay	-13.485* (7.084)	-13.659* (7.023)	232,465

Notes: Each cell reports the coefficient on *post*, with standard errors in parentheses. The controls column adds beds, government ownership, and nonprofit ownership.

Standard errors are clustered two ways by facility and calendar month. Statistical significance: *** $p < 0.01$, ** $p < 0.05$, * $p < 0.10$.
