

Table 1: Two-Way Fixed Effects Estimates of *post* on Staffing Outcomes (Baseline)

	Outcomes			
	RN	LPN	CNA	Total
HPPD	−0.032*** (0.005)	0.000 (0.006)	−0.054*** (0.009)	−0.086*** (0.013)
Log(HPPD)	−0.092*** (0.016)	0.003 (0.009)	−0.028*** (0.005)	−0.026*** (0.004)

Notes: Each cell reports the coefficient on *post* with two-way clustered standard errors (by facility and month) in parentheses. The table reports staffing levels (HPPD) and log staffing levels (Log(HPPD)). Sample: Without anticipation ($N_{\text{HPPD}} = 628,107$; $N_{\text{Log}} = 628,107$).

All specifications include facility and month fixed effects and covariates: *government*, *non-profit*, *chain*, *beds*, *occupancy rate*, *percent Medicare*, *percent Medicaid*, and state case-mix quartile indicators.

Statistical significance: *** $p < 0.01$, ** $p < 0.05$, * $p < 0.10$.
