Notes: Each cell reports the coefficient on *post* with two-way clustered standard errors (by facility and quarter) in parentheses. The third line in each cell reports significance stars, and the fourth line reports the estimation sample size used for that outcome.

All specifications include facility and quarter fixed effects and covariates: `government + non_profit + chain + beds + occupancy_rate + pct_medicare + pct_medicaid + rn_hprd + lpn_hprd + cna_hprd + cm_q_state_2 + cm_q_state_3 + cm_q_state_4`.

Statistical significance: *** $p < 0.01$, ** $p < 0.05$, * $p < 0.10$.

Outcomes included: QM 401, 404, 406, 407, 410, 419, 434, and 452. Sample window: 2017 Q1–2024 Q2.
