

FE-Only vs. Standard-Controls Specification, All Outcomes

Per C. Moul's request: each outcome estimated with (1) ONLY facility and time fixed effects plus *post* (no other covariates), and (2) the standard fully-controlled specification used elsewhere in this project, for direct comparison. All specifications use the donut design (anticipation window / transition period excluded).

Table 1: Staffing Outcomes (Monthly)

Outcome	FE + Treatment Only	Standard Controls	Observations
RN HPRD	-0.0349*** (0.0052)	-0.0316*** (0.0052)	626,307
LPN HPRD	-0.0027 (0.0059)	-0.0004 (0.0060)	626,307
CNA HPRD	-0.0519*** (0.0091)	-0.0548*** (0.0093)	626,307
Total HPRD	-0.0895*** (0.0127)	-0.0868*** (0.0129)	626,307

Notes: Each cell reports the coefficient on *post*, with standard errors in parentheses. **FE + Treatment Only** includes ONLY facility and time fixed effects plus *post* – no other covariates. **Standard Controls** is the fully-controlled specification used elsewhere in this project.

Standard errors are clustered two ways by facility and time period. Statistical significance: *** $p < 0.01$, ** $p < 0.05$, * $p < 0.10$.

Table 2: Strategic / Business-Model Outcomes (Monthly)

Outcome	FE + Treatment Only	Standard Controls	Observations
Occupancy rate	2.6491*** (0.3359)	2.8206*** (0.3443)	626,307
Medicare share	1.3575*** (0.2054)	1.0928*** (0.2142)	626,307
Medicaid share	−0.9001 (0.5567)	−1.5839*** (0.5755)	626,307
Average length of stay	−11.4359*** (4.0715)	−12.7772*** (4.5143)	614,480
Spare capacity	−0.0262*** (0.0033)	−0.0281*** (0.0034)	626,307

Notes: Each cell reports the coefficient on *post*, with standard errors in parentheses. **FE + Treatment Only** includes ONLY facility and time fixed effects plus *post* – no other covariates. **Standard Controls** is the fully-controlled specification used elsewhere in this project.

Occupancy rate, spare capacity, Medicare share, Medicaid share, and average length of stay are excluded from each other’s control set in the Standard Controls column (each pair is mechanically related).

Standard errors are clustered two ways by facility and time period. Statistical significance: *** $p < 0.01$, ** $p < 0.05$, * $p < 0.10$.

Table 3: Short-Stay Quality Measures (Quarterly)

Outcome	FE + Treatment Only	Standard Controls	Observations
Pneumococcal vaccine	−3.7194*** (0.6274)	−4.6356*** (0.6771)	180,687
New antipsychotic medication	−0.0082 (0.0427)	−0.0122 (0.0478)	149,556
Improved function	−0.1936 (0.4879)	−0.9714* (0.5602)	98,004
Influenza vaccine	−3.3858*** (0.6095)	−3.9127*** (0.6644)	144,903

Notes: Each cell reports the coefficient on *post*, with standard errors in parentheses. **FE + Treatment Only** includes ONLY facility and time fixed effects plus *post* – no other covariates. **Standard Controls** is the fully-controlled specification used elsewhere in this project.

Moderate/severe pain (qm_424) and new/worsened pressure ulcers (qm_425) are excluded (effectively unreported from 2019/2020 onward). Improved function is estimated on 2017–2022 only; influenza vaccine is estimated on 2018–2023 only, reflecting each measure’s actual reporting window.

The ownership-change quarter is excluded from all quality regressions.

Standard errors are clustered two ways by facility and time period. Statistical significance: *** $p < 0.01$, ** $p < 0.05$, * $p < 0.10$.

Table 4: Long-Stay Quality Measures (Quarterly)

Outcome	FE + Treatment Only	Standard Controls	Observations
Decline in physical functioning	0.3361 (0.2649)	0.1656 (0.2634)	187,479
Weight loss	0.1863* (0.1013)	0.1375 (0.1138)	195,198
Catheter use	-0.1750*** (0.0458)	-0.1749*** (0.0503)	197,383
Urinary tract infections	-0.3444*** (0.0742)	-0.3049*** (0.0762)	199,268
Falls with major injury	0.0089 (0.0617)	-0.0065 (0.0666)	200,090
Anti-psychotic medication use	-0.3571 (0.2121)	-0.1442 (0.2180)	195,943
Anti-anxiety/hypnotic medication use	-0.3939* (0.2012)	-0.4246* (0.2107)	196,496
Pressure injuries	0.1854 (0.1701)	0.1483 (0.1791)	139,667

Notes: Each cell reports the coefficient on *post*, with standard errors in parentheses. **FE + Treatment Only** includes ONLY facility and time fixed effects plus *post* – no other covariates. **Standard Controls** is the fully-controlled specification used elsewhere in this project.

CAVEAT: pressure injuries (qm_453) may have a coverage transition around Q4 2023 (successor code 479 identified in a separate investigation of the short-stay measures) that has NOT been re-verified or trimmed here.

Standard errors are clustered two ways by facility and time period. Statistical significance: *** $p < 0.01$, ** $p < 0.05$, * $p < 0.10$.
