

Table 1: Effect of Ownership Change on Staffing: HPRD vs. Raw Hours

Staff type	HPRD	Raw hours	log(Raw hours)	Observations
RN	−0.0316*** (0.0052)	−88.6315*** (14.3484)	−0.0843*** (0.0165)	626,307
LPN	−0.0004 (0.0060)	15.9617 (16.5588)	0.0122 (0.0096)	626,307
CNA	−0.0548*** (0.0093)	−75.4839** (29.2676)	−0.0181*** (0.0055)	626,307
Total	−0.0868*** (0.0129)	−148.1537*** (41.2565)	−0.0168*** (0.0048)	626,307

Notes: Each cell reports the coefficient on *post*, with standard errors in parentheses.

All models include facility and calendar-month fixed effects and the standard controls. Anticipation window excluded.

Standard errors are clustered two ways by facility and calendar month. Statistical significance: *** $p < 0.01$, ** $p < 0.05$, * $p < 0.10$.

Table 2: Effects of Ownership Change on Short-Stay Quality Measures: With vs. Without Occupancy Rate as a Control

Outcome	No controls	Controls (excl. occupancy)	Controls (incl. occupancy)	Observations
Pneumococcal vaccine	−3.7194*** (0.6274)	−4.5315*** (0.6805)	−4.6356*** (0.6771)	180,687
New antipsychotic medication	−0.0082 (0.0427)	−0.0180 (0.0481)	−0.0122 (0.0478)	149,556
Improved function	−0.1936 (0.4879)	−0.8119 (0.5656)	−0.9714* (0.5602)	98,004
Influenza vaccine	−3.3858*** (0.6095)	−3.8699*** (0.6641)	−3.9127*** (0.6644)	144,903

Notes: Each cell reports the coefficient on *post*, with standard errors in parentheses. All models include facility and calendar-quarter fixed effects.

Improved function is estimated on 2017–2022 only; influenza vaccine is estimated on 2018–2023 only.

The ownership-change quarter is excluded from all short-stay quality regressions.

Standard errors are clustered two ways by facility and calendar quarter. Statistical significance: *** $p < 0.01$, ** $p < 0.05$, * $p < 0.10$.
