

Table 1: Two-Way Fixed Effects Estimates of *post* on Quality Outcomes (2017 Q1–2024 Q2)

	Outcomes							
	QM 401	QM 404	QM 406	QM 407	QM 410	QM 419	QM 434	QM 452
Panel A: With $\tau = -1$								
Metric	0.131 (0.243)	0.098 (0.110)	-0.187*** (0.048)	-0.292*** (0.071)	-0.001 (0.063)	-0.199 (0.207)	-0.009 (0.047)	-0.415** (0.197)
Log(Metric)	-0.010 (0.019)	0.007 (0.019)	-0.069*** (0.016)	-0.094*** (0.019)	-0.003 (0.016)	-0.027 (0.017)	-0.001 (0.016)	-0.020* (0.011)
Panel B: Without $\tau = -1$								
Metric	0.086 (0.240)	0.098 (0.112)	-0.184*** (0.050)	-0.279*** (0.074)	0.007 (0.065)	-0.187 (0.210)	-0.015 (0.046)	-0.415* (0.206)
Log(Metric)	-0.013 (0.019)	0.006 (0.019)	-0.069*** (0.016)	-0.093*** (0.020)	-0.003 (0.016)	-0.025 (0.017)	-0.005 (0.016)	-0.020* (0.011)

Notes: Each cell reports the coefficient on *post* with two-way clustered standard errors (by facility and quarter) in parentheses. Panel A uses the sample with $\tau = -1$ retained. Panel B excludes observations with $\tau = -1$. Rows report levels and log-transformed quality metrics, where logs are computed as $\log(1 + y)$.

Sample sizes by outcome. Panel A levels: [188,762, 196,502, 198,690, 200,578, 201,403, 197,246, 150,667, 197,817]. Panel A logs: [188,762, 196,502, 198,690, 200,578, 201,403, 197,246, 150,667, 197,817]. Panel B levels: [187,445, 195,159, 197,339, 199,208, 200,030, 195,897, 149,652, 196,464]. Panel B logs: [187,445, 195,159, 197,339, 199,208, 200,030, 195,897, 149,652, 196,464].

All specifications include facility and quarter fixed effects and covariates: government + non_profit + chain + beds + occupancy_rate + pct_medicare + pct_medicare + cm_q_state_2 + cm_q_state_3 + cm_q_state_4.

Statistical significance: *** $p < 0.01$, ** $p < 0.05$, * $p < 0.10$.

Outcomes included: QM 401, 404, 406, 407, 410, 419, 434, and 452.

Table 2: Two-Way Fixed Effects Estimates of *post* on Quality Outcomes (2017 Q1–2023 Q3)

	Outcomes		
	QM 405	QM 451	QM 471
Panel A: With $\tau = -1$			
Metric	-0.385 (0.423)	-0.352 (0.339)	-0.180 (0.556)
Log(Metric)	0.000 (0.011)	-0.041* (0.022)	-0.004 (0.008)
Panel B: Without $\tau = -1$			
Metric	-0.428 (0.445)	-0.410 (0.347)	-0.169 (0.582)
Log(Metric)	-0.001 (0.012)	-0.044* (0.023)	-0.005 (0.009)

Notes: Each cell reports the coefficient on *post* with two-way clustered standard errors (by facility and quarter) in parentheses. Panel A uses the sample with $\tau = -1$ retained. Panel B excludes observations with $\tau = -1$. Rows report levels and log-transformed quality metrics, where logs are computed as $\log(1 + y)$.

Sample sizes by outcome. Panel A levels: [121,085, 163,199, 111,344]. Panel A logs: [121,085, 163,199, 111,344]. Panel B levels: [120,209, 162,013, 110,597]. Panel B logs: [120,209, 162,013, 110,597].

All specifications include facility and quarter fixed effects and covariates: government + non_profit + chain + beds + occupancy_rate + pct_medicare + pct_medicare + cm_q_state_2 + cm_q_state_3 + cm_q_state_4.

Statistical significance: *** $p < 0.01$, ** $p < 0.05$, * $p < 0.10$.

Outcomes included: QM 405, 451, and 471.

Table 3: Two-Way Fixed Effects Estimates of *post* on Quality Outcome QM 453 (2018 Q1–2023 Q3)

	Outcomes
	QM 453
Panel A: With $\tau = -1$	
Metric	0.132 (0.164)
Log(Metric)	0.014 (0.021)
Panel B: Without $\tau = -1$	
Metric	0.140 (0.170)
Log(Metric)	0.015 (0.022)

Notes: Each cell reports the coefficient on *post* with two-way clustered standard errors (by facility and quarter) in parentheses. Panel A uses the sample with $\tau = -1$ retained. Panel B excludes observations with $\tau = -1$. Rows report levels and log-transformed quality metrics, where logs are computed as $\log(1 + y)$.

Sample sizes by outcome. Panel A levels: [140,715]. Panel A logs: [140,715]. Panel B levels: [139,695]. Panel B logs: [139,695]. All specifications include facility and quarter fixed effects and covariates: *government* + *non_profit* + *chain* + *beds* + *occupancy_rate* + *pct_medicare* + *pct_medicaid* + *cm_q_state_2* + *cm_q_state_3* + *cm_q_state_4*.

Statistical significance: *** $p < 0.01$, ** $p < 0.05$, * $p < 0.10$.

Outcome included: QM 453.
