

Table 1: Effects of Ownership Change on Occupancy and Payer Mix

Outcome	Frequency	Reduced form	Basic controls	Observations
Occupancy rate	Monthly	2.649*** (0.336)	2.784*** (0.343)	626,307
Medicare share	Annual	1.392** (0.408)	1.256** (0.411)	57,011
Medicaid share	Annual	-1.035 (0.762)	-1.782* (0.849)	57,011

Notes: Each cell reports the coefficient on *post*, with standard errors in parentheses. Occupancy rate is measured at the facility-month level using the monthly staffing panel. The monthly occupancy specification excludes the three months immediately preceding the ownership-change month. Medicare and Medicaid payer mix are measured at the facility-year level. The ownership-change year is excluded from the annual payer-mix specifications because annual payer-mix measures may combine pre- and post-change periods.

Reduced-form models include facility and time fixed effects only. Basic-controls models additionally include ownership type, chain affiliation, and beds when available. Standard errors are clustered two ways by facility and calendar period.

Statistical significance: *** $p < 0.01$, ** $p < 0.05$, * $p < 0.10$.
