

Table 1: Two-Way Fixed Effects Estimates of *post* on Quality Outcomes (2017 Q1–2024 Q2)

	Outcomes							
	QM 401	QM 404	QM 406	QM 407	QM 410	QM 419	QM 434	QM 452
Panel A: With $\tau = -1$								
Metric	0.150 (0.247)	0.091 (0.110)	-0.189*** (0.048)	-0.285*** (0.072)	0.001 (0.064)	-0.217 (0.208)	-0.014 (0.047)	-0.400* (0.198)
Log(Metric)	-0.009 (0.019)	0.005 (0.019)	-0.070*** (0.016)	-0.092*** (0.019)	-0.004 (0.016)	-0.029 (0.017)	-0.003 (0.016)	-0.019* (0.011)
Panel B: Without $\tau = -1$								
Metric	0.254 (0.262)	0.095 (0.113)	-0.175*** (0.051)	-0.302*** (0.076)	-0.007 (0.067)	-0.134 (0.218)	-0.015 (0.048)	-0.421* (0.212)
Log(Metric)	-0.003 (0.020)	0.006 (0.020)	-0.066*** (0.017)	-0.095*** (0.020)	-0.007 (0.017)	-0.021 (0.018)	-0.005 (0.017)	-0.021* (0.011)

Notes: Each cell reports the coefficient on *post* with two-way clustered standard errors (by facility and quarter) in parentheses. Panel A uses the sample with $\tau = -1$ retained. Panel B excludes observations with $\tau = -1$. Rows report levels and log-transformed quality metrics, where logs are computed as $\log(1 + y)$.

Sample sizes by outcome. Panel A levels: [188,762, 196,502, 198,690, 200,578, 201,403, 197,246, 150,667, 197,817]. Panel A logs: [188,762, 196,502, 198,690, 200,578, 201,403, 197,246, 150,667, 197,817]. Panel B levels: [187,542, 195,249, 197,438, 199,311, 200,132, 195,998, 149,711, 196,555]. Panel B logs: [187,542, 195,249, 197,438, 199,311, 200,132, 195,998, 149,711, 196,555].

All specifications include facility and quarter fixed effects and covariates: government + non_profit + chain + beds + occupancy_rate + pct_medicare + pct_medicaid + rn_hprd + lpn_hprd + cna_hprd + cm_q_state_2 + cm_q_state_3 + cm_q_state_4.

Statistical significance: *** $p < 0.01$, ** $p < 0.05$, * $p < 0.10$.

Outcomes included: QM 401, 404, 406, 407, 410, 419, 434, and 452.

Table 2: Two-Way Fixed Effects Estimates of *post* on Quality Outcomes (2017 Q1–2023 Q3)

	Outcomes		
	QM 405	QM 451	QM 471
Panel A: With $\tau = -1$			
Metric	-0.302 (0.421)	-0.331 (0.338)	-0.158 (0.555)
Log(Metric)	0.002 (0.011)	-0.040* (0.022)	-0.003 (0.008)
Panel B: Without $\tau = -1$			
Metric	-0.307 (0.440)	-0.202 (0.347)	-0.218 (0.590)
Log(Metric)	0.003 (0.012)	-0.033 (0.023)	-0.004 (0.009)

Notes: Each cell reports the coefficient on *post* with two-way clustered standard errors (by facility and quarter) in parentheses. Panel A uses the sample with $\tau = -1$ retained. Panel B excludes observations with $\tau = -1$. Rows report levels and log-transformed quality metrics, where logs are computed as $\log(1 + y)$.

Sample sizes by outcome. Panel A levels: [121,085, 163,199, 111,344]. Panel A logs: [121,085, 163,199, 111,344]. Panel B levels: [120,274, 162,109, 110,645]. Panel B logs: [120,274, 162,109, 110,645].

All specifications include facility and quarter fixed effects and covariates: government + non_profit + chain + beds + occupancy_rate + pct_medicare + pct_medicaid + rn_hprd + lpn_hprd + cna_hprd + cm_q_state_2 + cm_q_state_3 + cm_q_state_4.

Statistical significance: *** $p < 0.01$, ** $p < 0.05$, * $p < 0.10$.

Outcomes included: QM 405, 451, and 471.

Table 3: Two-Way Fixed Effects Estimates of *post* on Quality Outcome QM 453 (2018 Q1–2023 Q3)

	Outcomes
	QM 453
Panel A: With $\tau = -1$	
Metric	0.141 (0.166)
Log(Metric)	0.014 (0.022)
Panel B: Without $\tau = -1$	
Metric	0.159 (0.181)
Log(Metric)	0.014 (0.023)

Notes: Each cell reports the coefficient on *post* with two-way clustered standard errors (by facility and quarter) in parentheses. Panel A uses the sample with $\tau = -1$ retained. Panel B excludes observations with $\tau = -1$. Rows report levels and log-transformed quality metrics, where logs are computed as $\log(1 + y)$.

Sample sizes by outcome. Panel A levels: [140,715]. Panel A logs: [140,715]. Panel B levels: [139,764]. Panel B logs: [139,764]. All specifications include facility and quarter fixed effects and covariates: government + non_profit + chain + beds + occupancy_rate + pct_medicare + pct_medicaid + rn_hprd + lpn_hprd + cna_hprd + cm_q_state_2 + cm_q_state_3 + cm_q_state_4.

Statistical significance: *** $p < 0.01$, ** $p < 0.05$, * $p < 0.10$.

Outcome included: QM 453.
